

Teens Speak Technology. RAAPS Speaks Teen.

RAAPS is the first technology-based risk identification and counseling system that was created specifically for professionals working with youth. Technology enables RAAPS to eliminate the most common real-world barriers to risk screening.

Today's youth haven't had to "learn" the benefits of technology — they were born into it. And it has been proven that youth are more honest with a technology interface when disclosing risks than with traditional oral or paper survey methods.

Technology Benefits 4 Youth

Health literacy features include an audio button so youth can listen to the question as it is read aloud.

Youth were involved with every aspect of RAAPS development - ensuring the questions, screen design, and images are relevant and engaging.

Evidence based messages are automatically generated for youth when they complete RAAPS, tailored to the risk information they shared.

SAFETY

Car crashes can happen at any time and at any speed. No one thinks they will be in an accident which is why it's important to wear a seatbelt, even if you are just driving around the corner. In fact, most crashes happen very close to home.

TO PROTECT YOURSELF:

- Wear a seatbelt whether you are in the front of the back seat.
- When you get in a car/truck adjust your seatbelt to make it more comfortable.
- Make a reminder sign or symbol and put it in the car somewhere that everyone will see it to remind them to buckle up.

Technology Benefits 4 Professionals 2

- ✔ **Efficiency** - completed by most youth in just 5 minutes. Professionals know key risks before they meet with youth face-to-face.
- ✔ **Efficacy** - with technology more risks are identified and youth lives improved.
- ✔ **Insight** - real time reporting provides easy access to data (identify trends, track outcomes, tailor programming.)
- ✔ **Standardization** - ensure every youth gets asked the same questions, the same way, every time.
- ✔ **Evidence-based** - tailored risk education messages are available at-a-glance, and use behavior-change science to help professionals navigate difficult conversations regardless of their level of familiarity or comfort with the topic.

98% of professionals who use RAAPS would recommend RAAPS to other providers!

“There has been a significant shift with the knowledge gained through simple, tech savvy screening in a population who notoriously does not talk to adults.”
